Proposed Solution

Project: Freelancer Web Application (MERN Stack)

Date	10 April 2026
Team ID	Your Team ID
Project Name	Freelancer Web Application
Maximum Marks	2 Marks

Introduction

The proposed solution aims to address the challenges faced by freelancers and clients in existing platforms. It provides a simple, secure, and efficient web application built using the MERN stack to connect freelancers with clients seamlessly.

S.No	Parameter	Description
1	Problem Statement	Freelancers struggle to find genuine projects while clients face difficulty
2	Idea / Solution Description	Develop a MERN-based Freelancer Marketplace that allows clients to p
3	Novelty / Uniqueness	User-friendly interface, beginner-friendly platform, transparent bidding s
4	Social Impact / Customer Satisfaction	Provides job opportunities for students and freelancers, improves hiring
5	Business Model	Commission on each transaction, premium subscriptions for freelancers
6	Scalability of the Solution	Built on scalable MERN architecture, can support large number of users

Detailed Explanation

Problem Statement:

Existing freelancing platforms often create barriers for beginners and lack transparency, making it difficult for both freelancers and clients to trust the system.

Solution Description:

The solution provides a complete MERN-based web platform that includes authentication, job posting, bidding, messaging, and payment systems.

Novelty:

The platform focuses on simplicity, fairness, and accessibility, especially for new freelancers.

Social Impact:

It helps students and professionals earn income and supports businesses in finding talent quickly.

Business Model:

Revenue is generated through commissions, subscriptions, and premium listings.

Scalability:

The system is designed to scale using cloud infrastructure and modular architecture.

Conclusion

The proposed solution effectively addresses real-world freelancing challenges and provides a scalable, secure, and user-friendly platform.
